基于thenextquant 的deribit交易所跨 期套利分享

Paul-zhou 2019-06-26

目录

DIGITAL ROAD GROUP

1跨期套利介绍

统计远近月合约价差分布情况,**当监控到价差异常时开仓交** 易,当价差回归时平仓。

正向套利: 做空远月, 做多近月

反向套利: 做多远月, 做空近月

1跨期套利介绍

采用方式比较:

- (1) 采用 连续合约 & 交割合约,收敛,有持仓费用
- (2) 采用 交割合约 & 交割合约,可能不收敛(期转现),无持仓费

2 thenextquant框架简介

2 thenextquant框架简介

3 下载与配置

https://github.com/TheNextQuant

4 程序编写

整体思路:

- (1) 行情: 跟踪远近月合约价差
- (2) 交易逻辑: 当达到开仓条件时,则发单交易,当收敛时则平仓
- (3) 资产信息
- (4) 风控预警: 钉钉、电话等

5 交易指令说明

deribit、bitmex只有买开和卖开指令,而okex和huobi则有买开、买平、卖开和卖平指令,为了统一,我们规定如下:

针对多头的操作

买开: action=buy, quantiy > 0 卖平: action=sell, quantity > 0

针对空头的操作

卖开: action=sell, quantity < 0 买平: action=buy, quantity < 0

6 程序编写--写一个案例
